

JEFF OUTREACH ENGINE

Consolidated Discovery Brief & Follow-Up Submission Guide

Prepared for Jeff and Coach Bouf | Working draft—rules require validation

Purpose: Combine the existing discovery materials into one source of truth, distinguish confirmed project direction from proposed starting points, and make Jeff’s next submission easy to complete.

1. Executive Summary

The existing material establishes a strong discovery and design framework, but it does not yet contain enough completed evidence to build autonomous outreach agents safely. The next phase is to collect Jeff’s real examples, observe his live workflow, and convert his judgment into explicit rules.

- HubSpot is intended to remain the CRM and operational source of truth.
- Codex is intended to serve as the AI operating and orchestration layer.
- The system should support research, qualification, messaging, CRM upkeep, meeting preparation, follow-up, and pipeline coaching.
- Human review is required before publishing, sending, changing sensitive CRM data, scheduling, or communicating with existing clients until Jeff explicitly approves a narrower autonomy policy.
- The framework should be reusable for other representatives, while Jeff’s ICP, voice, scoring, and decision rules remain configurable.

Current status: Discovery framework complete. Jeff-specific sales rules, evidence, examples, system access details, and approval boundaries remain open.

2. Source Review and Consolidation

Source	What It Contributes	Disposition
Jeff AI Revenue Engine Sales Process Discovery Interview Questionnaire	Comprehensive 22-section master question bank covering the complete sales lifecycle.	Retain as the master discovery reference.
Outreach Engine Sales Process Discovery Interview	Tighter version of the same question bank with revised Outreach Engine naming.	Absorbed; do not maintain separately unless a short

Source	What It Contributes	Disposition
Questionnaire		interviewer version is needed.
Outreach Engine Total Llan	120-minute agenda, proposed funnel, nine-agent model, HubSpot fields, live tests, and assignments.	Retain as the session/build-plan source; proposals still require validation.
Jeff P Interview 1 audio	Approximately 60 minutes of primary-source conversation supplied with this project.	Preserve as evidence; add a verified transcript and extracted decisions before treating statements as final rules.

3. Project Mission and Phase 1 Boundary

Mission: Build a practical, approval-gated Outreach Engine that helps Jeff identify better prospects, prepare stronger outreach, follow up consistently, and keep HubSpot current—without replacing Jeff’s judgment or creating compliance and trust risks.

In Phase 1

- Capture Jeff’s real end-to-end prospecting process and decision logic.
- Define the ICP, qualification rules, opportunity score, decision-maker hierarchy, and research standards.
- Draft outreach and follow-up content for Jeff’s review.
- Define HubSpot data requirements, attribution fields, and approval-gated updates.
- Test the workflow against three to five real prospects.
- Measure time saved, accuracy, message quality, and follow-up consistency.

Outside Phase 1 Until Approved

- Unreviewed outbound sending or automatic LinkedIn messaging.
- Automatic changes to deal stages, ownership, attribution, or commission qualification.
- Automatic scheduling or communication with existing clients.
- Claims that a prospect is overspending or guaranteed to save money without evidence.
- Complex automation architecture before the manual and AI-assisted workflow is validated.

4. Proposed End-to-End Workflow

Validation label: The sequence below is a proposed operating model derived from the planning documents. Jeff must confirm the actual stages, entry criteria, exit criteria, and HubSpot mapping.

Stage	Working Stage	Required Output
1	Prospect identified	Lead source and ownership recorded
2	Company qualified	ICP rules and disqualifiers applied
3	Decision maker identified	Primary and backup contacts validated
4	Research completed	Evidence, confidence, and gaps documented
5	Outreach prepared	Channel, message, CTA, and follow-up plan drafted
6	Human approval	Jeff reviews before any external communication
7	Outreach sent and logged	Activity, date, source, and next step captured
8	Response classified	Affirmative, objection, timing, referral, or stop
9	Conversation / assessment	Briefing, notes, actions, and follow-up drafted
10	Opportunity through client	Pipeline, attribution, outcome, and commission evidence maintained

5. Proposed Nine-Agent Operating Model

Design principle: Treat these as modular roles first. Do not build nine separate complex automations until the shared workflow, data contract, and approval rules are validated.

#	Role	Core Output	Human Checkpoint
1	Prospect Research	Company fit, evidence, disqualifiers, source links	Jeff validates rules and exceptions
2	Decision Maker	Primary/secondary contacts and confidence	Jeff resolves ambiguous titles or employment
3	Relationship Mapping	Warm paths and appropriate connection angles	Jeff approves introduction requests
4	Company Intelligence	Concise account brief and possible spend categories	No unsupported overspending claims
5	Outreach	Email, LinkedIn, call, voicemail, and follow-up drafts	Jeff approves every send in Phase 1
6	CRM Management	Prepared records, notes, tasks, and attribution updates	Sensitive writes require approval
7	Meeting Preparation	Account briefing, questions, objections, talking points	Jeff selects final agenda

#	Role	Core Output	Human Checkpoint
8	Post-Meeting	Summary, follow-up draft, tasks, next agenda	Jeff verifies notes and approves follow-up
9	Pipeline Coach	Daily priorities, stalled deals, next actions, weekly review	Jeff owns prioritization and disposition

6. Proposed Scoring and Prioritization Model

Use this only as a discussion starter. Jeff must define the factors, weights, thresholds, and examples before the score drives any action.

Factor	Draft Points	Evidence to Define
Company fit	25	Industry, geography, ownership, locations, operating model
Company size	20	Revenue, employees, footprint, estimated addressable spend
Potential cost opportunity	20	Relevant expense categories and observable business signals
Decision-maker access	15	Contact confidence, reachable finance/operations leader
Relationship strength	10	Direct relationship, warm introduction, credible mutual connection
Current business signal	10	Expansion, acquisition, leadership change, hiring, or other relevant trigger

- Proposed pursue threshold: Jeff to define.
- Automatic disqualifiers: Jeff to define.
- Low-confidence rule: route to Jeff rather than infer missing facts.

7. Non-Negotiable Guardrails

- Never claim or imply that a company is overspending without verified evidence.
- Never reveal intent-data sources or other sensitive research methods in outreach.
- Never fabricate a business problem, mutual relationship, testimonial, result, or personal detail.
- Never use personal information that would feel invasive, irrelevant, or inappropriate.
- Never send, schedule, publish, modify sensitive CRM fields, or contact an existing client without the approved human checkpoint.
- When sources disagree, preserve the conflict, show confidence, and ask Jeff to decide.
- Log what the system recommended or changed, the source evidence, and who approved it.
- Honor opt-outs, do-not-contact requirements, channel rules, and applicable outreach/recording policies.

8. Jeff's Follow-Up Submission Package

Jeff can submit the material in batches. Original files are better than summaries because the examples will be used to extract voice, rules, edge cases, and CRM requirements.

Batch	Items	What It Unlocks
A — Required first	3–5 real target companies; 3 past wins; 3 strong-looking losses; ICP examples and disqualifiers	Unlocks qualification and scoring rules
B — Messaging evidence	5 successful prospecting emails; 5 weak/unsuccessful emails; typical follow-ups; LinkedIn conversations; scripts	Unlocks Jeff voice and outreach playbook
C — Offer evidence	Spend Assessment materials; service descriptions; presentation; FAQs; objections; case studies; testimonials	Unlocks accurate offer messaging
D — CRM evidence	HubSpot screenshots/export of pipeline stages, lead statuses, required fields, sequences, tasks, and current automations	Unlocks data mapping and safe write rules
E — Commercial rules	Attribution definition; commission qualification; existing-relationship treatment; reviewer and review cadence	Unlocks auditable revenue-share tracking
F — Approval rules	What AI may draft, create, update, schedule, or send; what always requires approval; unacceptable-error list	Unlocks autonomy policy

9. Live Workflow Capture Instructions

Record a screen-share while Jeff completes the real process from start to finish using HubSpot, Sales Navigator, ZoomInfo, LeadIQ, company sites, email, and any other actual tools. Jeff should narrate why he clicks, skips, trusts, rejects, or changes course.

1. One prospect Jeff accepts quickly.
2. One prospect Jeff rejects after research.
3. One ambiguous or surprising prospect that exposes an exception.
4. One outreach draft and the edits Jeff makes before approving it.
5. One HubSpot update, including the fields he always completes and the fields he avoids.
6. One follow-up decision: continue, change channel, nurture, refer, or stop.

For every meaningful decision, capture

Field	Question
Trigger	What caused Jeff to consider taking action?
Decision	What did Jeff decide?
Rule	Why did he make that decision, and how could the system repeat it?

Field	Question
Action	What happened next, in which tool, and what was recorded?
Exception	When would Jeff do something different?
Confidence	What evidence is sufficient, and when must the system ask?

10. Open Decision Register

Area	Decision Needed	Owner
ICP	Minimum/ideal size, industries, geography, ownership, locations, disqualifiers	Jeff
Offer	Exact Spend Assessment promise, inputs, outputs, timing, obligation, next steps	Jeff
Scoring	Factors, weights, pursue threshold, stop threshold, confidence policy	Jeff + Coach Bouf
Contacts	Preferred titles by company size and source-trust hierarchy	Jeff
Messaging	Voice, CTA, length, cadence, stop rules, phrases to use/avoid	Jeff
HubSpot	Pipeline stages, required properties, permissions, sequences, integrations	Jeff + system review
Attribution	Sourced vs. assisted, affirmative-interest signal, existing relationships, verification	Jeff + Coach Bouf
Autonomy	Draft/create/update/send/schedule permissions and approvals	Jeff + Coach Bouf
Compliance	Outreach channels, consent, opt-out, recording, retention, and data-use rules	Business/legal owner
Success	30-day targets and baseline measures	Jeff + Coach Bouf

11. Recommended Build Sequence

7. Add the verified Interview 1 transcript and extract decisions, examples, contradictions, and unresolved questions.
8. Receive Jeff's first follow-up batch: real prospects, wins/losses, and messaging examples.
9. Run the live screen-share workflow capture and validate the actual tool sequence.
10. Finalize the sales playbook, ICP rules, scoring rubric, guardrails, and HubSpot data contract.

- 11. Build one approval-gated pilot workflow: research → recommendation → outreach draft → Jeff approval → CRM logging.
- 12. Test on three to five prospects and compare manual versus AI-assisted time, accuracy, and quality.
- 13. Only then decide which modular roles deserve separate skills or automations.

12. Phase 1 Acceptance Criteria

- Jeff confirms that the documented workflow matches how he actually works.
- Every qualification and scoring rule has examples and a documented exception path.
- Every generated factual claim is traceable to a source or labeled as a hypothesis.
- No external communication occurs without the approved checkpoint.
- HubSpot field mapping and attribution definitions are approved before automation writes.
- Three to five real-prospect tests are completed and reviewed.
- Baseline and pilot measures show whether the workflow saves time without lowering quality or trust.

Appendix A — Recommended HubSpot Attribution Fields

Status: These fields came from the session plan and require validation against the current HubSpot schema before creation.

Field	Working Purpose
Outreach Engine Sourced	Yes / No / Assisted / Unknown classification
Outreach Engine Assisted	Records material AI support on an existing or human-sourced opportunity
First AI Outreach Date	Date of the first approved AI-assisted outreach
First Affirmative Interest Date	Date of the agreed qualifying response or action
Affirmative Interest Source	Email, LinkedIn, phone, meeting, referral, or other approved source
Original Lead Source	Preserves the original acquisition source
AI Agent Used	Records the role or workflow that contributed
Qualified for Revenue Share	Approval-controlled commercial determination

Appendix B — Consolidation Notes

The questionnaires overlap: retain the longer version as the master bank and the shorter version as the interviewer guide. The 120-minute plan proposes structure, but it is not proof of Jeff’s actual process. This brief preserves all unknowns as open decisions.
